

The Echelford Primary School - DT Progression Document

Structures		
	Reception	Year 2
Product	Naughty Bus Rockets Ongoing through Continuous Provision and Junk Modelling	Houses
Research	Talk about products that already exist and are familiar to them.	Explore and evaluate a range of existing products
Design	Creates collaboratively sharing ideas, resources and skills Discuss thoughts and ideas. Think about resources that will be needed. E.g tape, glue, scissors, paint etc.	Design products for others and themselves that are purposeful, functional and appealing Generate, develop, model and communicate ideas through talking, drawing, templates and ICT
Make	Safely uses and explores a variety of materials, tools and techniques, experimenting with colour, design, texture, form and function (ELG: Creating with Materials)	Build structures, exploring ways to stiffen, stabilise and strengthen Explore and use mechanisms - hinges

	<p>Uses simple tools and techniques safely (e.g. scissors)</p> <p>Choose resources independently for their chosen activity.</p> <p>Use tape or glue to join pieces together.</p> <p>Adapt work where necessary.</p>	<p>To investigate different techniques for stiffening a variety of materials and explore different methods of enabling structures to remain stable.</p> <p>To choose tools to use and select materials based on my knowledge of their properties</p> <p>Fold, tear and cut paper and card</p> <p>Select and name the tools needed to work for the materials</p> <p>Roll paper to create tubes</p> <p>Create hinges</p> <p>Select from and use a wide range of materials and components (according to their characteristics) eg construction, textiles and ingredients</p> <p>Select from and use a wide range of tools and equipment to perform practical tasks eg cut, shape, join and finish</p>
Evaluate	<p>Makes use of props and materials when role playing characters in narratives and stories (ELG: Creating with Materials)</p> <p>Shares his/her creations, explaining the process he/she has used (ELG: Creating with Materials)</p> <p>Talk about what has been made and the steps taken to achieve the outcome.</p>	<p>Explore and evaluate a range of existing products eg home, school</p> <p>Evaluate own ideas and designs against given design criteria</p> <p>Talk about their designs as they develop and identify good and bad points</p> <p>Discuss how closely their finished product meets their design criteria</p>
Knowledge	<p>Glue and sticky tape are joining materials.</p>	<p>Frame Structures There are different ways you can assemble frame structures. They could be made from materials such as wood,</p>

We join materials to make a simple product.

cardboard, paper, metal or plastic. They have the following parts: -

Base - the bottom of something

Top - the highest point, the upper edge or surface

Side - a line forming the boundary

- Frame Structure - building the inside supports first of something and then adding an outside covering
- Stable - something that does not fall over easily
- Weak - not strong, fragile, easily broken
- Strong - not easily broken, sturdy
- Cladding - a material put on top of something else to protect it or make it look better
- Structure - something that has been made and put together and can stand on its own
- Function - the purpose of an object
- Architect - a person who designs buildings
- Material - the matter from which a thing is made

Structures			
	Year 3	Year 4	Year 6 (Structures and Mechanisms)
Product	Structures to withstand an earthquake	Volcano	Shadow Puppet Theatre

		develop design criteria	generate own design criteria
Design	<p>Communicate ideas using different strategies eg discussion, sketch</p> <p>Use research to inform design</p> <p>Take risks to become innovative and resourceful</p> <p>Develop more than one design or an adaptation of an initial design</p> <p>Draw/sketch products to help analyse how products are made</p> <p>Think ahead about the order of their work and decide upon tools and materials</p> <p>To create labelled designs using technology – add notes to drawings to help explanations</p> <p>Decide which design idea to develop</p>	<p>Draw/sketch products to help analyse how products are made</p> <p>Communicate, generate and develop ideas using a range of strategies eg prototypes, pattern pieces</p> <p>Take risks to become innovative and resourceful</p> <p>Think ahead about the order of their work and decide on tools and materials</p> <p>Plan a sequence of actions to make a product</p> <p>Develop more than one design or adaptation of an initial design</p> <p>Decide which design idea to develop</p>	<p>Confidently take calculated risks to become innovative, resourceful and enterprising</p> <p>Generate, model and communicate ideas through discussion, annotate sketches, cross sectional and exploded diagrams, prototypes, pattern pieces and computer aided design. Follow a brief to achieve an effect for a particular function.</p> <p>Sketch and model alternative ideas</p> <p>Combine, model and draw to refine ideas. Record and recall ideas using annotated diagrams</p> <p>Draw plans that can be read and followed by someone else, ensuring they can independently produce a list of tools, equipment and materials they would need to carry this out successfully. Develop one idea in depth. Record ideas using annotated diagrams including measurements.</p> <p>Give a report using correct technical vocabulary</p> <p>Justify and critically evaluate models and designs, using a fixed criteria (either designed as a group or independently).</p>
	Select and use appropriate tools	Select from and use a wider range of tools, equipment, materials and	According to their functional properties and aesthetic qualities, select from and use a

	<p>Safely measure, mark out, cut, assemble and join with some accuracy.</p> <p>Apply understanding of how to strengthen, stiffen and reinforce structures</p> <p>I can strengthen frames with diagonal struts. I can apply techniques I have learnt to strengthen structures and explore my own ideas.</p> <p>Use a glue gun with 1-1 supervision</p> <p>Select from and use a wide range of tools, equipment, materials and components accurately</p> <p>Apply understanding of how to strengthen, stiffen and reinforce structures</p>	<p>components accurately to make prototypes</p> <p>Apply understanding of how to strengthen, stiffen in order to reinforce more complex structures</p> <p>Prototype frame and shell structures</p> <p>Select and use appropriate tool and equipment</p> <p>Use a wide range of methods to strengthen, stiffen and reinforce complex structures. Build a more complex 3D structure and apply knowledge of strengthening techniques to make them stronger or more stable.</p>	<p>wide range of tools, equipment, materials and components accurately to make high quality prototypes</p> <p>Construct more complex structures by applying range of strategies in order to solve real / relevant problems</p> <p>Making connections to real & relevant problems, apply understanding of wider range of mechanical systems (gears, pulleys, cams, levers and linkages)</p> <p>I am learning to apply my understanding of how to strengthen, stiffen and reinforce more complex structures</p> <p>Cut strip materials accurately to 1mm.</p> <p>Cut slots in construction materials</p> <p>Accurately assemble and join materials using appropriate methods.</p> <p>Use a glue gun with close supervision to join different materials.</p> <p>Use a craft knife, cutting mat and safety ruler under 1-1 supervision.</p> <p>Create a model on the basis of accurate plans and make refinements as necessary.</p>
--	--	---	--

Evaluate	<p>Evaluate own ideas and designs against given design criteria and consider the views of others to improve their work</p> <p>Investigate a range of existing products that address real / relevant problems, in a range of relevant contexts eg home, leisure, school</p> <p>Identify the strengths and weaknesses of their design</p> <p>Discuss how well the finished product meets the design criteria and meets the needs of the user</p> <p>Understand how design and technology has helped the world to develop</p> <p>Consider and explain how the finished product can be improved</p>	<p>Evaluate own and others' work suggesting improvements and consider the views of others to improve their work</p> <p>Decide which design idea to develop and explain why this choice has been made</p> <p>Identify the strengths and weaknesses of their own and others' design and suggest improvements</p>	<p>Generate own design criteria and critique ideas and products against these</p> <p>Investigate and evaluate products and images to collect ideas.</p> <p>Use design criteria to inform decisions about ways to proceed.</p> <p>Reflect on their work using their design criteria. Can they explain any changes they had to make and why?</p> <p>Understand how key events and key designers have helped shape the world.</p> <p>Investigate and evaluate products and images to collect ideas.</p> <p>Identify what does and does not work in their product and those made by others. How can they adapt this next time?</p> <p>Justify their decisions about materials and methods of construction and suggest alternatives.</p> <p>Give feedback with thought and care for how this feedback could be received.</p>
Knowledge	<p>Some frame structures are used to protect things – a roof can be a frame structure – or to hold things, such as a milk carton or egg box. They need to be strong and stable and different materials can be</p>	<p>A 'Shaduf' is a hand-operated machine used to transport water from a lower level to a higher one. It was used by the Ancient Egyptians to help water crops.</p> <p>A lever is a simple mechanism consisting of a beam or rigid rod at a fixed hinge.</p>	<p>Layering and stacking makes structures stronger.</p> <p>A linkage is an assembly of systems connected to manage forces and movement. This supports a product by allowing a range of movement that</p>

added to help reinforce them

- Reinforce - to make something stronger
- Shell Structures - are structures with a solid outer shell

How to Use a Saw

- Fix the wood in a vice or clamp.
- Hold the saw with one hand.
- Place the other hand on the table, away from the saw.
- Start by pulling the saw back, before gently sawing.
- Try to keep the saw straight.

Diagonal struts make a strong structure.

A rounded outer structure is particularly strong because it spreads forces across the whole structure.

is realistic in representation.

Different equipment is used to cut, shape and join materials are required based on the properties of materials

craft knife safety

1. Keep knife blades sharp.
2. Only use a knife for its intended purpose.
3. Use the appropriate knife for the job.
4. Don't cut towards your fingers with the sharp edge.
5. Always use a cutting mat.
6. Cut away from your body.
7. Put knife in case or cover when carrying.
8. To hand a knife to someone, set it down on a table and let them pick it up.
9. Properly dispose of old cutting blades.
10. Use a metal ruler to cut straight lines.

Research	Research products that already exist		Explore and evaluate a range of existing products
Design	<p>Discuss and draw ideas and use ICT to communicate</p> <p>Design simple products that work and look appealing</p> <p>Explain what they are making and what materials they are using.</p> <p>To use pictures and words to describe what</p>	<p>Design simple products that work and look appealing</p> <p>Explain what they are making and what materials they are using.</p> <p>Talk about products that already exist</p> <p>Describe their models and drawings of ideas and intentions.</p>	<p>Design products for others and themselves that are purposeful, functional and appealing</p> <p>Generate, develop, model and communicate ideas through talking, drawing, templates and ICT</p> <p>I can design useful, pleasing products for myself and other users designed on a design brief. I can generate develop , model and communicate my ideas through talking drawing templates</p>

	<p>they need to do.</p>	<p>Describing what they need to do next.</p> <p>I can create a simple design for my product. I can use pictures and words to describe what I want to do.</p>	<p>mock ups and IT</p> <p>Compare products that already exist.</p>
Make	<p>Use a range of tools and equipment to perform practical tasks eg cut, shape, join and finish</p> <p>Use a range of materials and components eg construction, textiles and ingredients</p> <p>To select from and use a range of tools and equipment to perform practical tasks. eg. cutting, shaping, joining, finishing.</p> <p>To experiment with different materials to design and make products in 2 and 3 dimensions.</p>	<p>Explore simple mechanisms</p> <p>Use a range of tools and equipment to perform practical tasks eg cut, shape, join and finish</p> <p>Uses simple tools and techniques safely (e.g. scissors)</p> <p>Choose resources independently for their chosen activity.</p> <p>Use tape or glue to join pieces together.</p> <p>Adapt work where necessary.</p> <p>Follow verbal instructions</p> <p>See glue gun used by adults.</p> <p>To build structures, exploring how they can</p>	<p>Select from and use a wide range of materials and components (according to their characteristics) eg construction, textiles and ingredients</p> <p>Select from and use a wide range of tools and equipment to perform practical tasks eg cut, shape, join and finish</p> <p>Explore and use mechanisms eg levers, wheels and axles</p> <p>Make vehicles with construction kits which contain free running wheels</p> <p>Use a range of materials to create models with wheels and axles</p> <p>Investigate joinings: temporary, fixed and moving</p> <p>Join appropriately for different materials and</p>

		<p>be made stronger, stiffer and more stable.</p> <p>To select from and use a range of tools and equipment to perform practical tasks. eg. cutting, shaping, joining, finishing.</p> <p>To experiment with different materials to design and make products in 2 and 3 dimensions.</p> <p>Make structures by joining simple objects together.</p> <p>Cut out shapes, which have been created.</p> <p>Cut along lines, straight and curved</p> <p>Fold, tear, and fold paper and card.</p>	<p>situations</p> <p>See glue-gun used by an adult</p> <p>To safely measure, mark out and cut and shape materials and components using a range of tools</p>
Evaluate	<p>Explore existing products eg home, school</p> <p>Discuss own ideas and designs</p> <p>Discuss how their finished products meet their design criteria.</p> <p>Identify the good and bad points of their designs.</p>	<p>Explore existing products eg home, school</p> <p>Discuss own ideas and designs</p> <p>Talk about what has been made and the steps taken to achieve the outcome.</p> <p>Discuss how their finished products meet their design criteria.</p>	<p>Evaluate own ideas and designs against given design criteria</p> <p>Explore and evaluate a range of existing products eg home, school</p> <p>Talk about their designs as they develop and identify good and bad points</p> <p>Discuss how closely their finished product</p>

	<p>Talk about changes made during the making process.</p> <p>Say what they like and don't like about items they have made and attempt to say why.</p> <p>A product must be appealing</p>	<p>Identify the good and bad points of their designs.</p> <p>Talk about changes made during the making process.</p> <p>Say what they like and don't like about items they have made and attempt to say why.</p>	meets their design criteria
Knowledge	<ul style="list-style-type: none"> Design - A plan for the construction of an object or system that has a purpose. Design Criteria - A list of goals which the product must meet in order to be successful. Mock up - When you test out your design by making it up. <p>It is important to choose a material carefully when making a product.</p> <p>Toys need to be carefully decorated to make them appealing.</p> <p>Target audience means to consider who the product is made for.</p> <p>When making a hole in a product you need a sharp point, like a pencil and some plasticine or blu tack to press the point into.</p>	<p>Scissors can be used to cut complex shapes. You may need to turn a page while keeping the scissors in the corner.</p>  <ul style="list-style-type: none"> Existing Product - A product that has been made by someone else. Mechanism - An object which has moving parts. Sliders - A mechanism for making movements from side to side or up and down. Slot - a hole through which a lever is placed into to enable the part to move Levers - A rigid length of material which moves around a fixed point. Rigid - Stiff and not able to move easily Pivot - The point at which something turns. <p>Books can have moving parts in them such as levers, sliders, wheels and pop up parts</p>	<p>Vehicles move using a mechanism called 'wheel and axle'. An axle is a rod and a wheel is a circular object. Other objects use the same mechanism to move, for example a Ferris Wheel. Materials can join together differently.</p> <ul style="list-style-type: none"> Axle: a rod on which one or more wheels can rotate, either freely or be fixed to and turn with the axle. Axle holder: the component through which an axle fits and rotates. Chassis: the frame or base on which a vehicle is built. Friction: resistance which is encountered when two things rub together. Dowel: wooden rods used for making axles to hold wheels.

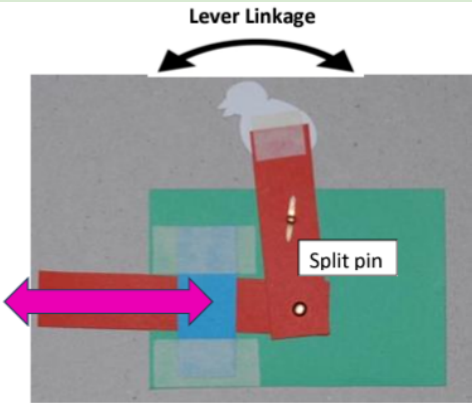

which you can move in different directions.

When you assemble a mechanism you need to use the appropriate fasteners for the job. This might be a split pin, tape, string or glue.

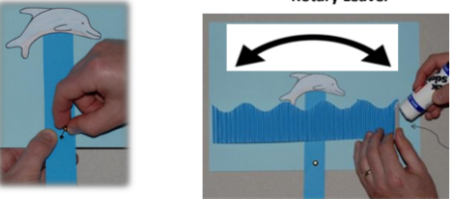

You can hide your mechanism on your moving picture. You can do this by creating slots to house mechanisms behind the picture and flaps to hide mechanisms.

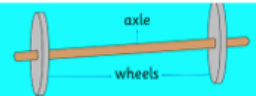

Lever Linkage

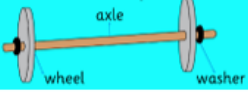

Rotary Lever

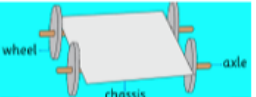

Different ways to attach axles and chassis

1. Attach axles firmly to the wheels so the axle rotates and the wheel turn with it.

2. Attach wheel loosely on the axle. You need to use something to stop the wheels from falling off. This can be a bolt or washer.

1. Attach axles to the chassis from underneath. This means the axles will not turn around. Place the wheels over the axle but do not attach it so that the wheels can rotate around the axle.

2. Put the axle through the holes in the chassis so the axle can turn around. Attach the wheels firmly to the axle so they turn when the axle turns.

Mechanisms

Product	Shaduf	Space Orrery
Research	Use research to inform design	Use research to inform design and generate own design criteria

Design	<p>Communicate ideas using different strategies eg discussion, sketch</p> <p>Take risks to become innovative and resourceful</p> <p>Develop more than one design or an adaptation of an initial design</p> <p>Draw/sketch products to help analyse how products are made</p> <p>Think ahead about the order of their work and decide upon tools and materials</p> <p>Propose realistic suggestions of how they can achieve their design ideas</p> <p>To create labelled designs using technology – add notes to drawings to help explanations</p> <p>Decide which design idea to develop</p>	<p>Communicate, generate and develop ideas, drawing on other disciplines eg science, maths, computing</p> <p>Confidently take calculated risks to become innovative, resourceful and enterprising</p> <p>Communicate, generate, develop and model ideas using a range of strategies eg computer-aided-design, cross-sectional and exploded diagrams</p> <p>Investigate products and images to collect ideas</p> <p>Record ideas using annotated diagrams</p> <p>Draw plans which can be read or followed by someone else</p>
Make	<p>Identify range of mechanical systems and how they work (gears, pulleys, cams, levers and linkages)</p> <p>Select and use appropriate tools</p> <p>Make structures more stable by giving them a wide base</p> <p>Use a glue gun with 1-1 supervision</p> <p>Cut slots in construction materials</p> <p>Use linkages and other mechanisms to make movement larger or more varied</p> <p>Develop structures to strengthen their products</p> <p>Use a glue gun with 1-1 supervision</p>	<p>Construct more complex structures by applying range of strategies in order to solve real / relevant problems</p> <p>Drawing on disciplines & making connections to wider subject areas, apply understanding of computing to program, monitor and control products</p> <p>Making connections to real & relevant problems, apply understanding of wider range of mechanical systems (gears, pulleys, cams, levers and linkages). According to their functional properties and aesthetic qualities, select from and use a wide range of tools, equipment, materials and components accurately to make high quality prototypes</p> <p>Cut accurately and safely to a marked line with the appropriate tool</p> <p>Make prototypes</p>

		Join and combine materials with temporary, fixed or moving joints
Evaluate	<p>Evaluate own ideas and designs against given design criteria and consider the views of others to improve their work</p> <p>Identify the strengths and weaknesses of their design</p> <p>Discuss how well the finished product meets the design criteria and meets the needs of the user</p> <p>Understand how design and technology has helped the world to develop</p> <p>Consider and explain how the finished product can be improved</p>	<p>Generate own design criteria and evaluate ideas and products against these</p> <p>Investigate and analyse a range of existing products that address real / relevant problems, in a range of relevant contexts</p> <p>Understand how key events and individuals in D&T helped to shape the world</p> <p>Use the design criteria to inform the decisions about ways to proceed</p> <p>Justify their decisions about materials and methods of construction</p>
Knowledge	<ul style="list-style-type: none"> Shaduf is a device used in Egypt for irrigation, consisting of a long suspended rod with a bucket at one end and a weight at the other end. Irrigate/Irrigation the practice of supplying land with water so that crops and plants will grow. Lever a rigid bar resting on a pivot, used to move a heavy or firmly fixed load with one end when pressure is applied to the other. Pivot the central point, pin, or shaft on which a mechanism turns or oscillates. Oscillate move or swing back and forth in a regular rhythm. Counterweight a weight that, by exerting an opposite force, provides balance and stability to a mechanical system. Its purpose is to make lifting the load more efficient, which saves energy and is less taxing on the lifting machine. 	<p>A mechanism is a system or structure of moving parts.</p> <p>Mechanical system - a set of related parts or components used to create movement.</p> <p>Mechanisms, including levers, pulleys and gears, allow us to use a smaller force to have a greater effect and change motion.</p> <p>An orrery is a mechanical model of the Solar System. It shows the relative positions and motions of the planets.</p> <p>The planets rotate around the sun as they would in the solar system.</p> <p>The first orrery is thought to date from around 150BC!</p>

					contexts
Knowledge	<p>Fabrics are materials we use for a lot for things like clothes, furniture, curtains and blankets.</p> <p>Fabrics are produced by weaving materials like cotton, nylon, wool or silk together to create a large piece of material, we then shape this material to make the things we need.</p> <p>Fabrics can be:</p>  <p>You should choose your fabric carefully for your product.</p> <p>Threading means to pass (a long, thin object or piece of material) through something and into the</p>	<p>Thread - a long, thin strand of cotton, nylon, or other fibres used in sewing or weaving.</p> <p>Needle - a tool used to sew.</p> <p>Sew - to join pieces of fabric with stitches</p> <p>Mock Up - a practice which allows you to try out ideas using cheaper materials and temporary joints.</p> <p>To thread a needle you need to:</p> <ol style="list-style-type: none"> 1. Hold the flat end of the needle threader with one hand, and the needle with the other. 2. Push the wire loop through the head of the needle. 3. Keep the loop in the eye of the needle, and push the end of the thread through the wire loop. 	<p>Textiles are all around us. Our clothes, carpets, furniture, cushions, curtains, towels. We use fabrics and textiles everyday. Weaving is the basis structure for most fabrics. You can weave almost anything to make interesting textures and textiles.</p> <p>Weaving is an ancient art/craft where two threads are interlinked to form a fabric or textile. One set of threads are held tight on a frame vertically; these are called the warp. The weft runs across the warp threads moving over and under the weft threads to create the fabric or textile.</p>	<p>Embroidery is a way of decorating fabric using a needle and thread.</p> <p>Cross Stitch</p>  <p>Chevron Stitch</p>  <p>Binca: A stiff, mesh fabric designed for embroidery for beginners</p> <p>Felt: A thick type of fabric made by pressing fibres together</p> <p>Embroidery thread: A soft thread used for sewing and embroidery</p> <p>Needle: A very fine slender piece of polished metal with a point at one</p>	<p>Back Stitch</p>  <p>Blanket Stitch</p>  <p>Running Stitch</p>  <p>Fray - to unravel or become</p>

required position for use.

4. Pull the loop out of the eye of the needle, and it takes the thread with it.

You need to knot the opposite end of the thread so that it is secure.

Running stitch is a way of joining material using thread. It consists of a line of small stitches that run back and forth through the material without overlapping.

Decorations can be added to material with glue and they add detail to show what the puppet is.

Glove puppet - fits over

- Weaving The interlacing of different materials to create a pattern.
- Weft The material that you are threading with.
- To thread The act of lacing something over and under a loom.
- Plain weave A style of weaving in which the weft alternates over and under the loom.
- Direction The way in which something travels or moves.
- Loom The material we weave our weft through

end and a hole or eye for thread at the other, used in sewing.

Stitch: A loop of thread made with a threaded needle

Appliqué: Ornamental needlework in which pieces of fabric are sewn or stuck on to a larger piece to form a picture or pattern.

worn at the edge

Applique - to attach a decorative fabric item onto another piece of fabric by glueing and/or sewing.

		your hand and you can use your fingers to operate its head and arms

Knowledge

You have to wash your hands before handling or preparing food.

Fruits come from the flowering part of a plant and contain seeds.

Vegetables are the edible parts of a plant, such as the leaves, stem, roots, and bulbs

Some fruit is grown here in the UK and you can even find some growing wild.

Fruit needs a lot of sun to grow and ripen so lots of the fruit you eat is grown in warmer countries.

Some foods that we call vegetables are actually fruits.

The fruit of a plant is the part that contains the seeds. So foods like tomatoes, cucumbers and peppers are fruits not vegetables because they contain seeds.

You should eat a minimum of five portions of fruit and vegetables every day.

- Grown: when something is cultivated from a seed to be processed and eaten
- Reared: the breeding and raising of animals to use as food
- Caught: method by which some animals are captured to be processed for eating
- Processed: food that is altered to change the properties of that food.
- Fresh: food which has not been cooked or processed
- Food groups - a collection of foods that have similar nutritional properties.
- Carbohydrates - a food group that gives us energy that is used by the body
- Protein - a food group that helps us grow and build muscle
- Dairy - a food group that is important for strong teeth and bones
- Seasonality- food that you may find during a particular season

The Bridge

The Claw

The Fork Secure

It is important to measure out the correct amount of ingredients using scales. The scale must start at zero.

Ingredients can be combined to make a dish.

Some of these ingredients may need to be cooked, some can be left raw.

You must consider the properties of the ingredient and your final

It is crucial to take into account the properties of ingredients, seasonality and sensory characteristics when choosing ingredients for a stew.

The amount of ingredients will depend on the final quantity but the ratio of ingredients needs to stay the same.

Varying ingredients might change the taste and texture of a final product.

By combining ingredients we can make a nutritious meal.

Nutritional value helps us understand how healthy a food is.

Mixing: putting ingredients together using a spoon, whisk or blender.

Food processing equipment			
Utensil	food	effect	mouth feel
	orange	makes juice	liquid
	apple	unpeeled apple	crunchy
	carrot	thin rings	crispy hard

Fruit can be added to cereal or porridge to make a tasty, healthy breakfast.

spreading

1. First decide what type of filling you would like and check to see if there is some available.
2. Next take two slices of bread and butter each of them on one side only.
3. Put your filling on one slice of bread, butter side up. You may choose two fillings.

produce when making decisions about how each ingredient should be prepared – grated, chopped, left whole, washed, cooked etc
